***Faces of Earth* to Air July 23rd on The Science Channel**

Alexandria, VA – Production on the high-definition television series *Faces of Earth* is complete with the first episode, “Assembling America,” premiering Monday, July 23 at 9 PM (ET/PT) on The Science Channel.

Faces of Earth, produced by the American Geological Institute (AGI) and Evergreen Films for The Science Channel, is a four-part series exploring how Earth is constantly remade by the forces of nature. The series reveals the natural world around us through those that can read it best – geoscientists. We follow along as the scientists use high technology and high adventure to see the world like we have never before, and to understand how humans are both a force of nature, and a product of our world. From the formation of the planet to the emergence of life, and the dynamic internal and external processes that have shaped our world and culture, *Faces of Earth* brings Earth to life.

Faces of Earth employs state-of-the-art computer graphics, aerial photography, and science in exploring Earth’s past, present and future geologic story. To learn more about *Faces of Earth* and to watch trailers from the series go to <http://www.facesofearth.tv>.

The American Geological Institute is a nonprofit federation of 44 geoscientific and professional associations that represents more than 120,000 geologists, geophysicists and other earth scientists. Founded in 1948, AGI provides information services to geoscientists, serves as a voice of shared interests in the profession, plays a major role in strengthening geoscience education, and strives to increase public awareness of the vital role the geosciences play in society's use of resources and interaction with the environment.
